DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 14, 2003 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 2 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art, Figure 1.

Figure 1 (admitted prior art) discloses a vehicle lift comprising plurality of vehicle lifting runway 112, 114, a volumetric system including an operating fluid supply 124, a pair of main cylinders 116, 118 and a pair of secondary cylinders 120, 122 that cooperate to move the runways

Art Unit: 3652

wherein the main cylinders receive fluid directly from the fluid supply 124 and each of the secondary cylinders receive fluid from a respective one of the main cylinders.

Figure 1 discloses the pair of main cylinders disposed at one of the runways and the pair of secondary cylinders disposed at the other runway, instead of "each runway includes one of said main cylinders and one of said secondary cylinders" as recited in claim 2.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to place one of the main cylinders and one of the secondary cylinder at each of the runways, since it has been held that rearranging parts of an invention involves only routine skill in the art.
